

# 5G Network Emulation Solutions

## 3GPP Release 16

Zhiyi Lu  
4-20-2022

# Agenda

- R16 AND Test Solution

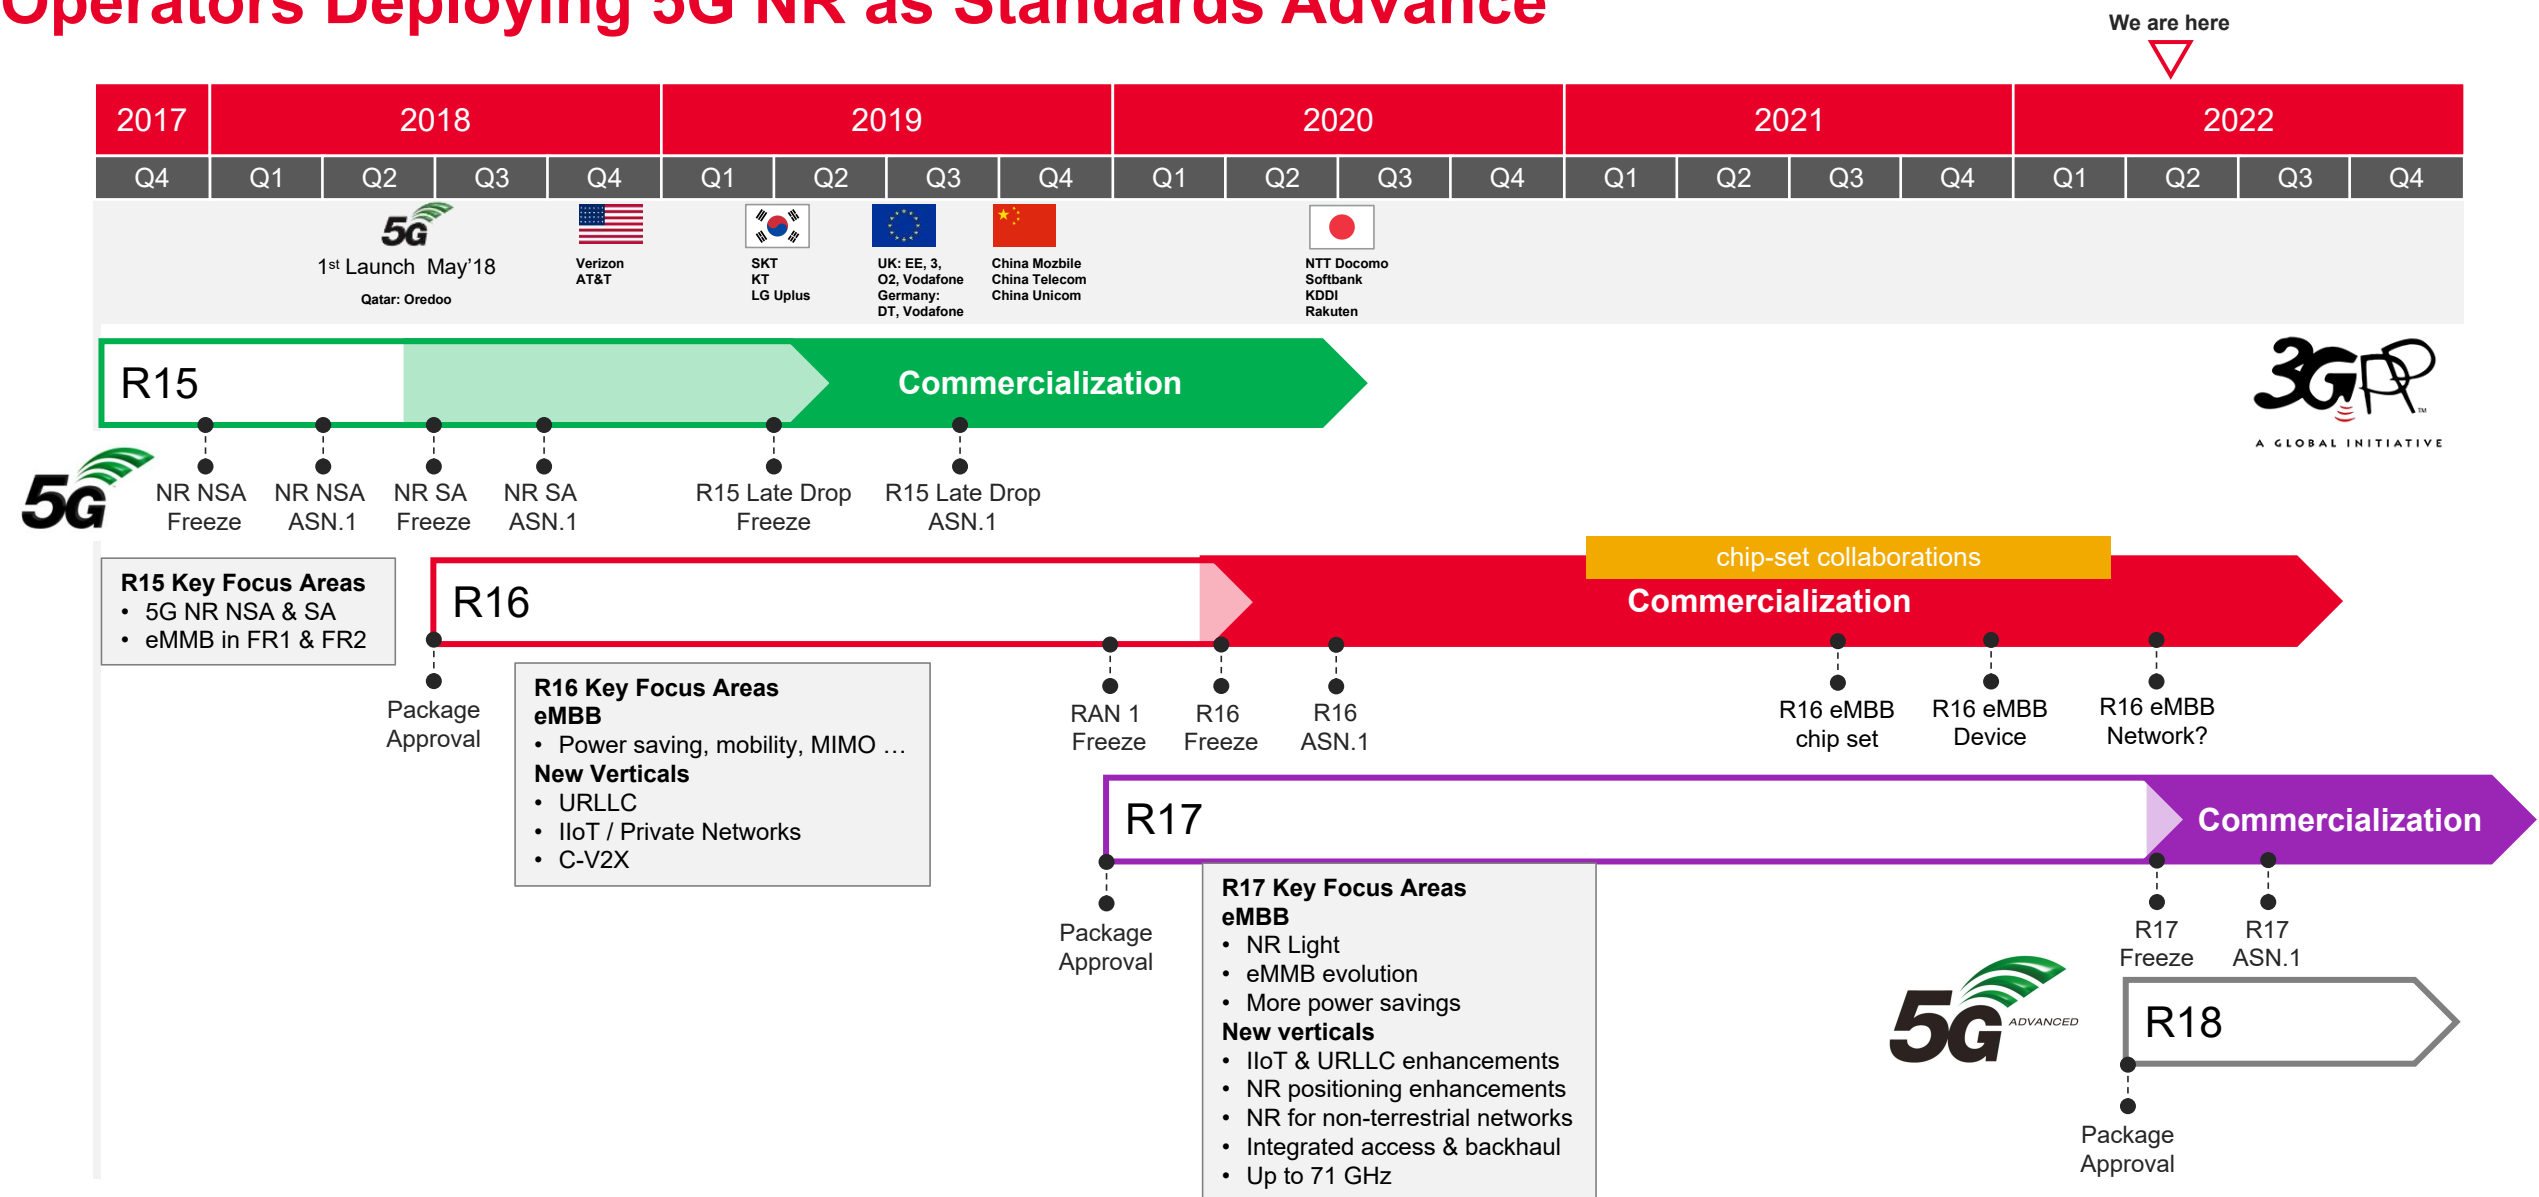

R16 Roadmap and Market status

R16 eMBB and Vertical Features

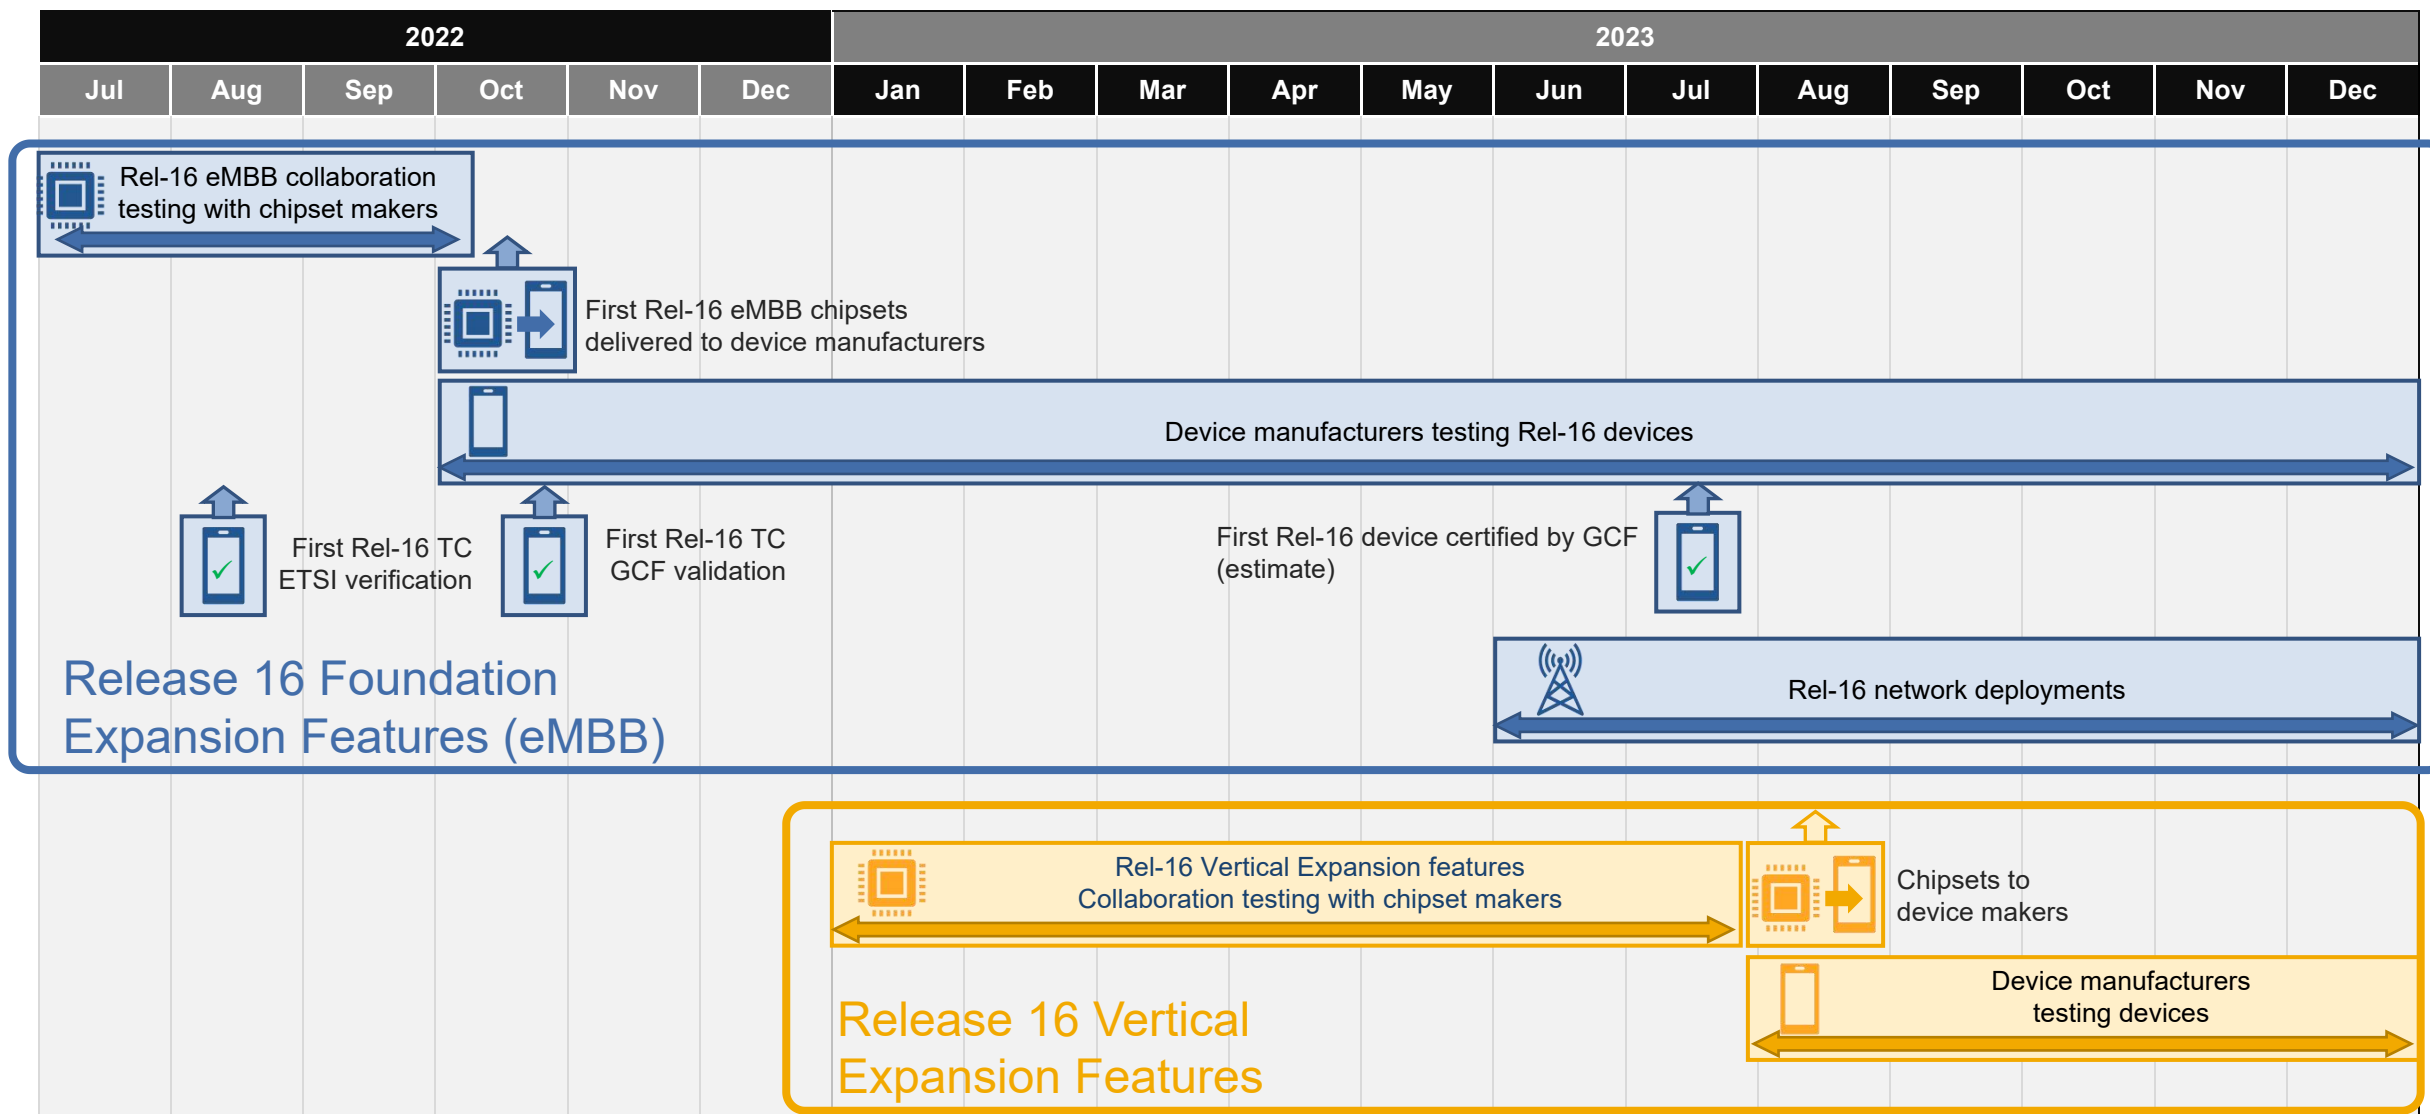

Keysight R16 Solution

QA

# Operators Deploying 5G NR as Standards Advance

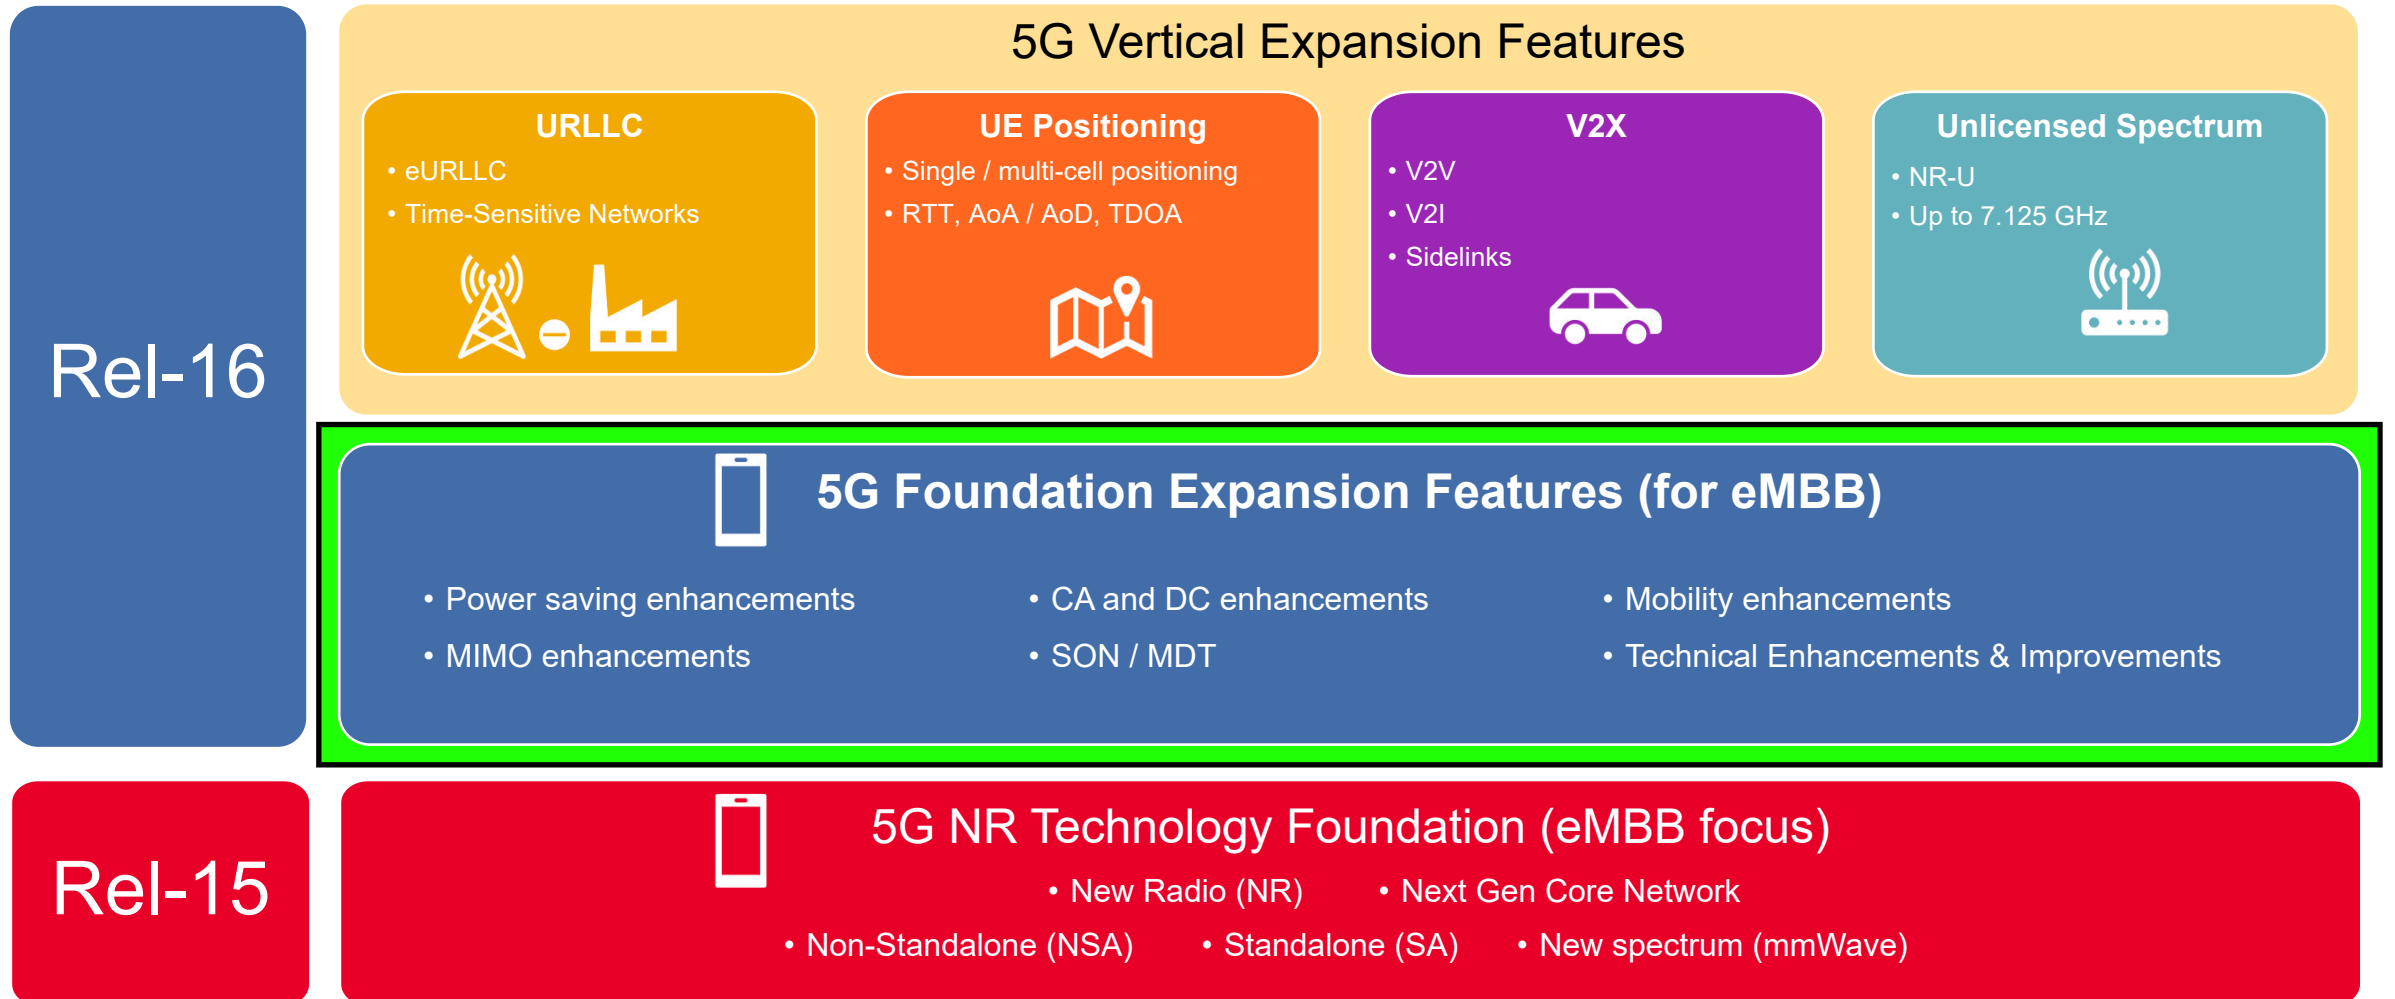

# 5G Rel-16 Market Requirements Timeline

# 5G Rel-16 Foundation and Vertical Expansion Features

- Feature Groupings

# 5G Rel-16 Foundation Expansion Features

# R16 UE Power Saving

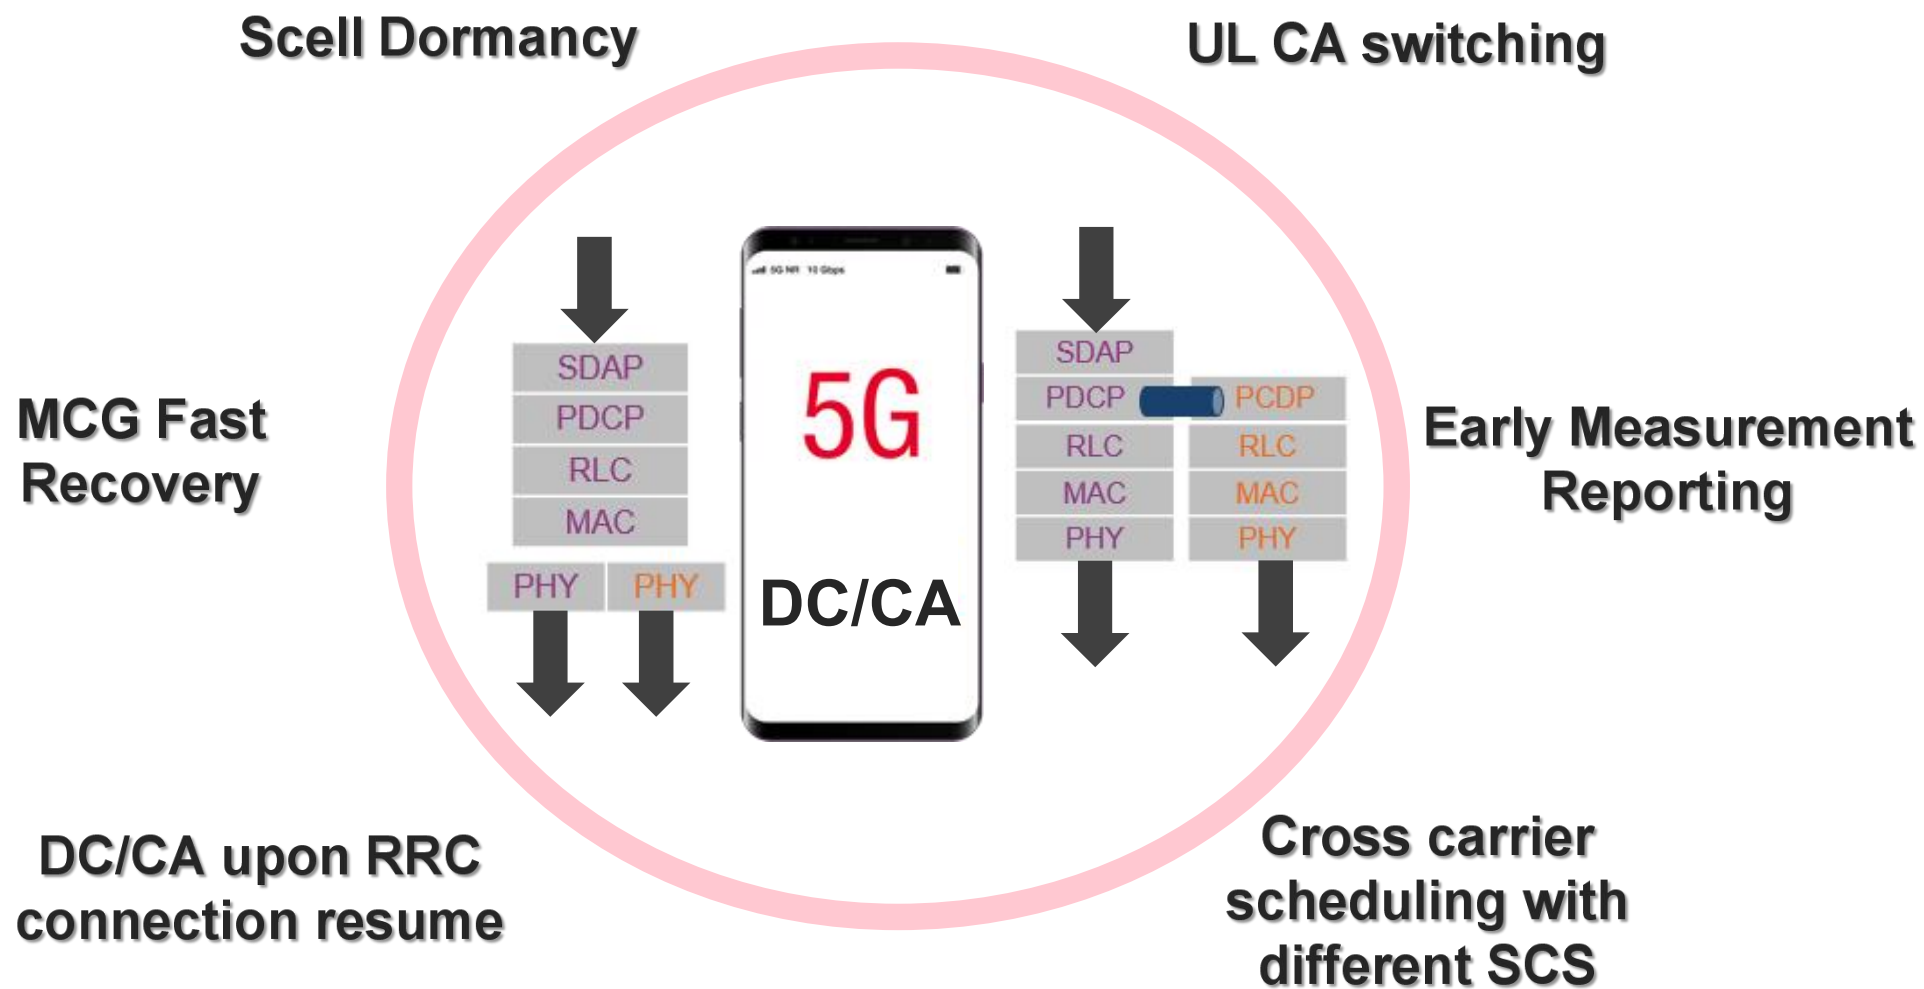

- Enhancing power efficiency

# R16 DC/CA Enhancements

- Increasing robustness, reducing latency

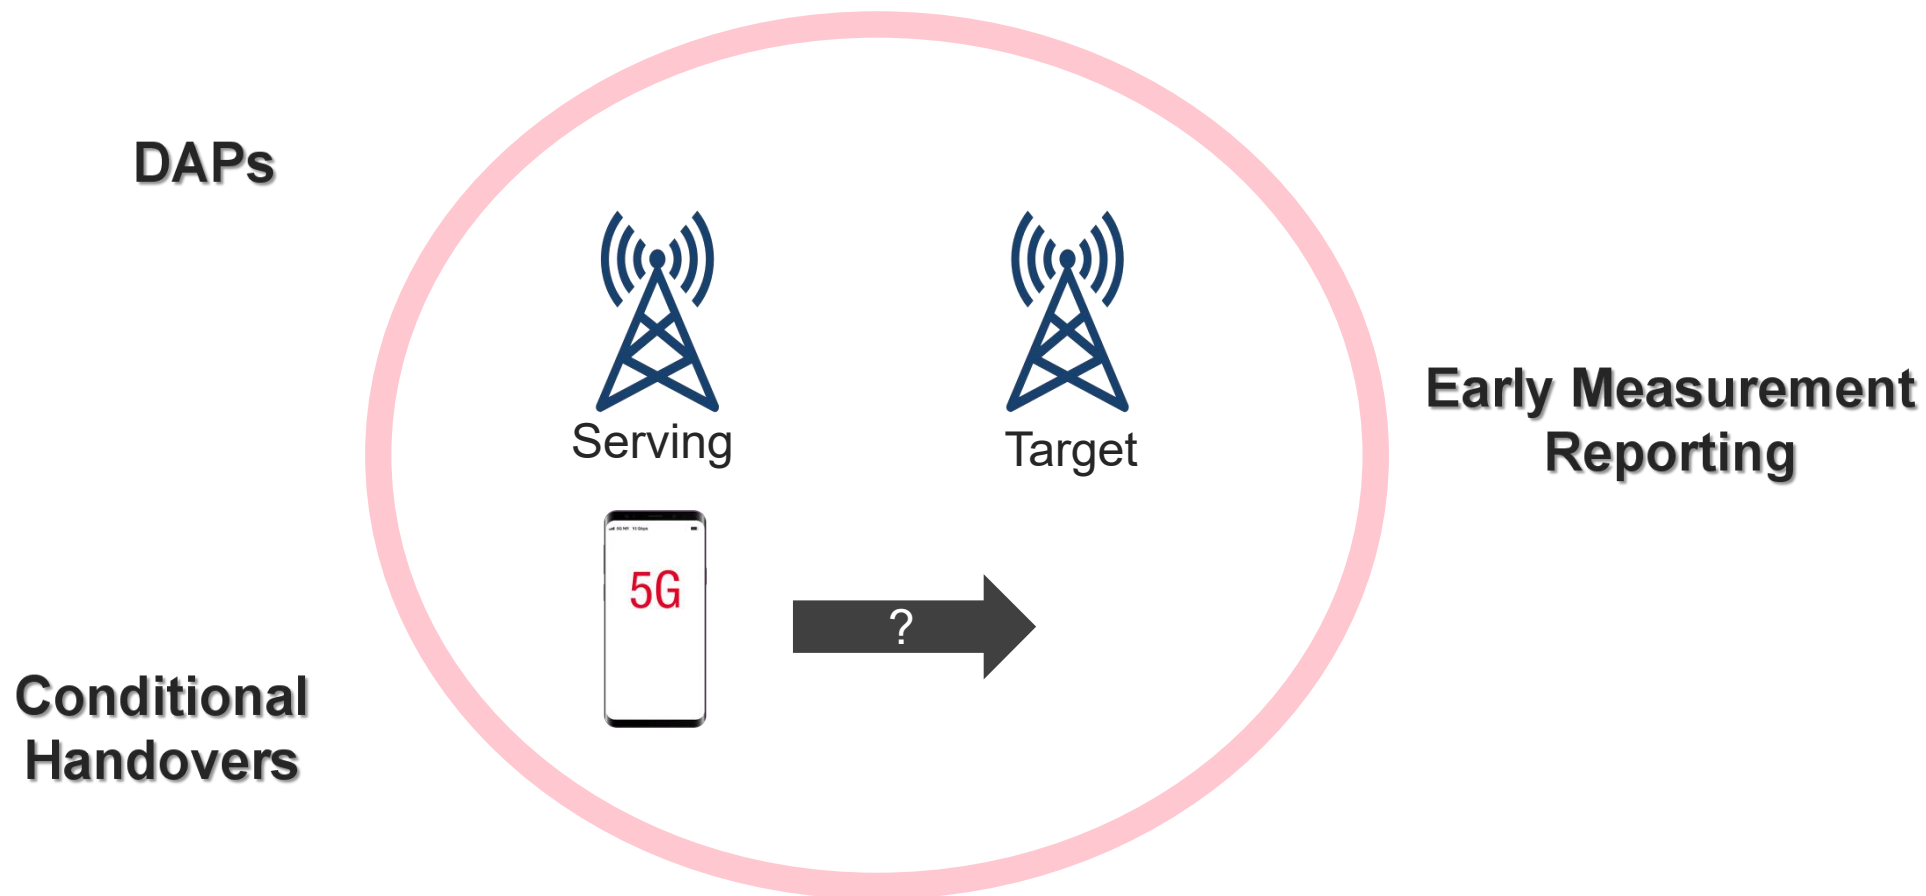

# R16 MIMO Enhancements

- Multiple MIMO improvements

# R16 Mobility Enhancements

- Increasing robustness, reducing latency

# R16 TEI

- Technical enhancement or improvement

# 5G Rel-16 UE Positioning

- Delivers 3m indoor and 10m outdoor accuracy requirements 80% of time
- New Positioning Reference Signal (PRS) allows detection of more neighbouring transmission points
- Network-based positioning methods
  - Multi-cell positioning
    - Round Trip Time (RTT)
    - Angle of Arrival / Departure (AoA / AoD)
    - Time Difference of Arrival (TDOA)
  - Single cell positioning
    - AoA + RTT
- Location Positioning Protocol (LPP) or Secure User Plane (SUPL) protocols

# 5G Rel-16 Vertical Expansion Features

# New Devices and New Applications

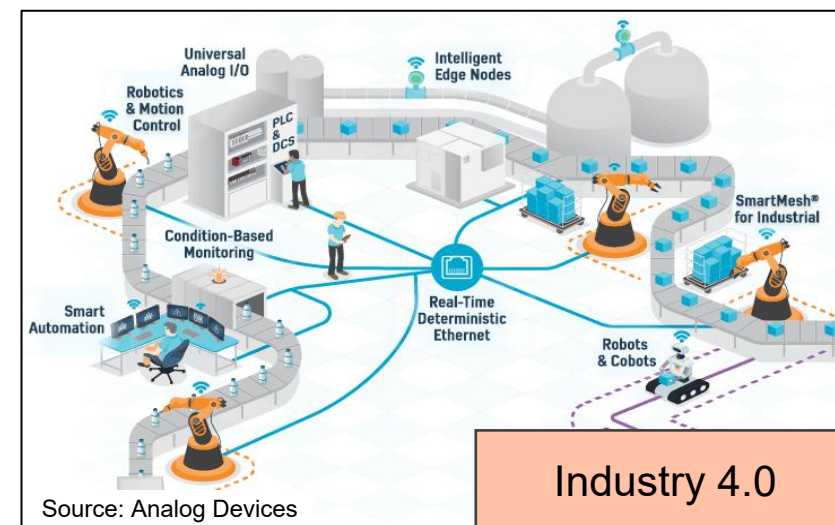

- Enabled by “REAL TIME”R16 technology

- Human / machine interaction in real time via the internet
- Remote surgery

- Superimpose intelligent computer generated images on real world views
- Made more powerful by new devices

- Cars that can drive themselves
- Cars that can manage themselves

- Cyber physical systems
- Integrating computing, networking and physical processes
- Security is vital

# 5G Rel-16 URLLC Enhancements

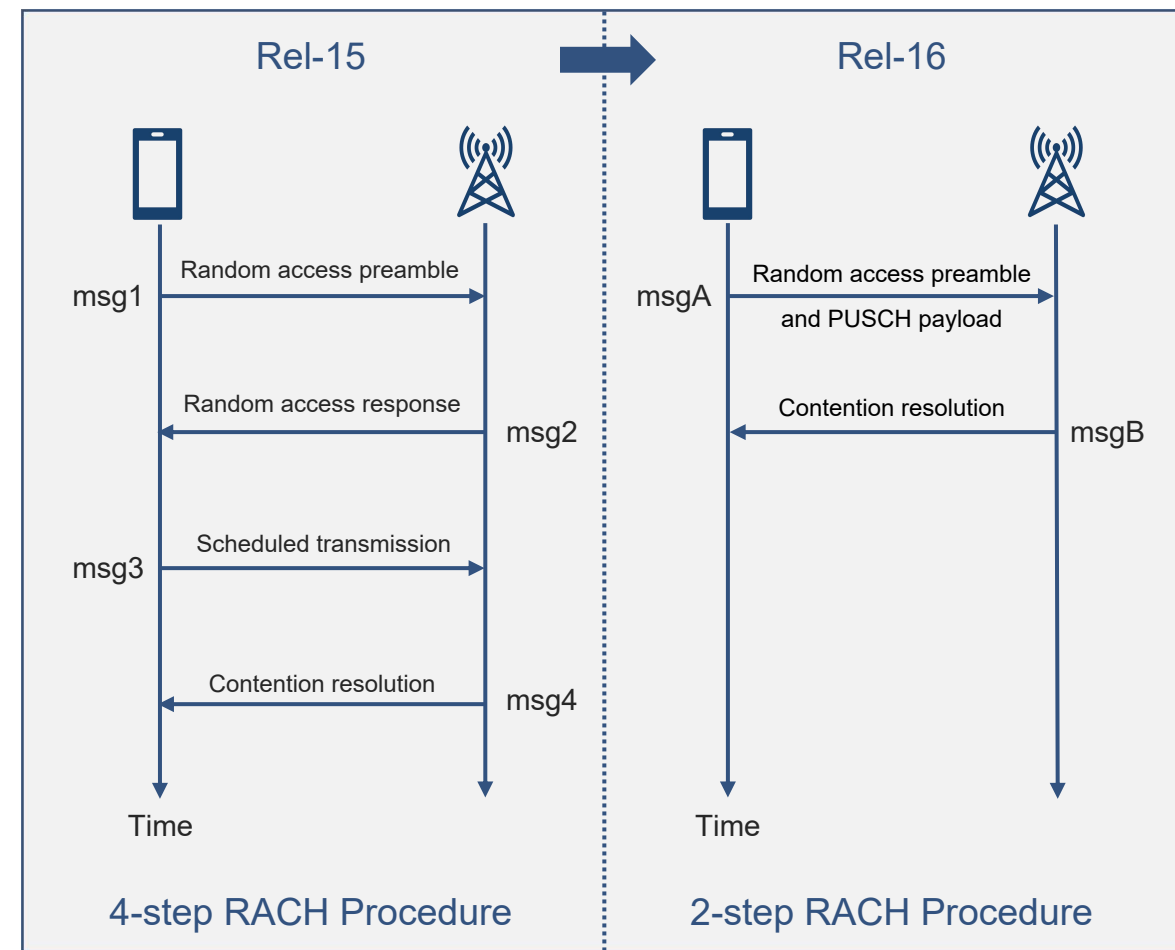

- Rel-16 eURLLC builds on the Rel-15 URLLC foundation
- Low Latency
  - Multiple BWPs mixed numerology
  - DL pre-emptive scheduling (puncture an eMBB allocation)
  - CBG-based HARQ
  - UL configured grant scheduling
  - UL pre-emptive scheduling
- Ultra Reliability
  - Blind repetitions
  - New CQI table optimised around  $10^{-5}$
  - PDCP layer packet duplication increased from 2 to 4

# 5G Rel-16 2-step RACH Procedure

- Improves efficiency of the existing Rel-15 RACH Procedure
- Reduces number of steps from 4 to 2
- Reduces signaling overhead and latency
- Improves capacity and power efficiency
- Supports small grant-free uplink

# Keysight 5G Rel-16 Solution

# UXM 5G Test Application

Multi-Domain

## Overview

- The most comprehensive R&D solution in the market
- A suite of tools for RF and Functional testing
- Rich parameterization enabling a wide range of test scenarios
- Supports early development test phases, from prototyping to systems integration and verification
- Scalable from development to full-rack RF acceptance
- Flexible, easy-to-use interface
  - A single, all-inclusive user interface for both RF and Functional testing
  - Test devices interactively across all network scenarios
  - Easily automate your own test scenarios via SCPI commands

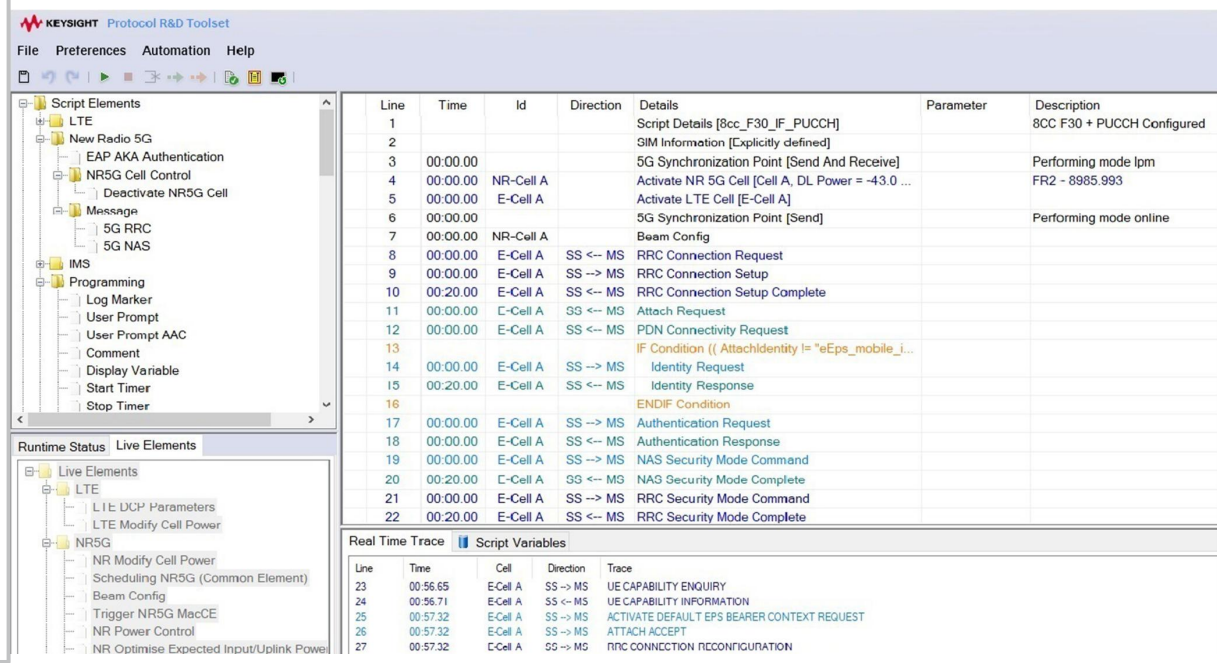

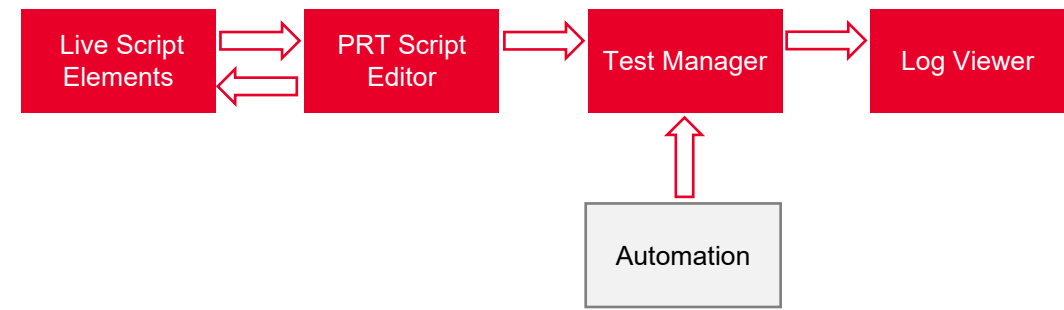

E7515B UXM 5G wireless test platform

# S8701A Protocol R&D Toolset

## Overview

- Comprehensive solution for wireless chipsets and devices
  - Supports early development and test phases
  - From prototyping to systems integration and verification
- Toolset designed for protocol and application testing by
  - Protocol stack developers
  - Systems integration
  - Verification teams
- Flexible, easy-to-use interface enables
  - Building tests with no programming knowledge required
  - Test development acceleration during feature integration and regression phases

E7515B UXM 5G wireless test platform

## Keysight Enables Samsung to Establish 5G Data Call Based on 3GPP Release 16 Specifications

Selects Keysight's 5G test platforms to validate modem according to latest 5G NR standard

June 14, 2021 11:00 AM Eastern Daylight Time

SANTA ROSA, Calif. —([BUSINESS WIRE](#))—[Keysight Technologies](#), Inc. (NYSE: KEYS), a leading technology company that delivers advanced design and validation solutions to help accelerate innovation to connect and secure the world, announced that [Samsung Electronics' System LSI Business](#), a global leader in semiconductor components and 5G technology, has selected the company's 5G test platforms to establish a 5G data call based on 3GPP release 16 (Rel-16) specifications.

[@Keysight Enables Samsung to Establish #5G Data Call Based on 3GPP Release 16 Specifications. Selects Keysight's 5G test platforms to validate modem according to latest #5G NR standard #semiconductor](#)

 [Tweet this](#)

Samsung selected [Keysight's 5G network emulation solutions](#) to successfully demonstrate a data link based on 3GPP Rel-16 specifications for the 5G new radio (NR) standard. Finalized in 2020, Rel-16 brings numerous enhancements to 5G NR deployments, leading to improved spectrum use, lower network latencies and higher connection reliability. Such improvements are critical to machine-to-machine (M2M) communications in industrial automation, autonomous vehicles and greater operational efficiencies for service providers.

"We're pleased to support Samsung's strategic 5G technology goals with integrated software-based chipset and device test solutions for validating new designs according the latest 3GPP specifications across the protocol stack," said Cao Peng, vice president and general manager for Keysight's wireless test group. "Keysight is committed to delivering test platforms that accelerate commercial introduction of 5G devices and networks to 5G leaders such as Samsung."

Samsung used [Keysight's 5G Protocol R&D Toolset](#) and [Test Application software](#) to validate the modem maker's [Exynos Modem chipset](#), which many global device makers use to bring 5G products to market. The toolset enables Samsung to perform 3GPP Rel-16 physical layer interoperability development testing (IODT), verify power saving (IDT) performance and validate new radio to new radio dual connectivity (NRDC) functionality, in both sub-7GHz (FR1) and mmWave (FR2) spectrum.
